Re: Remote Marriage Application

Product Summary:

The Remote Marriage Application is designed specifically to facilitate marriage license application processing in a remote and virtual environment. The application is purpose-built to support Texas County Clerk's when exercising their duties outlined in **S.B. No. 907, SECTION 1. Subchapter A, Chapter 2, Family Code, Section 2.0091**. This process creates constituent satisfaction and increases efficiency and safety for governmental users by reducing in-person visits and physical contact with County office staff, improves the accuracy of required data collection, and allows for validated remote electronic signatures.

Sole Source Basis:

Remote Marriage Application is proprietary software developed to specifically integrate directly with the GovOS CountyFusion and Vanguard suite of applications. This unique integration between applications provides a seamless and real-time data transfer between the Remote Marriage Application and Tarrant County's existing CountyFusion system-of-record. Both CountyFusion and Vanguard applications can only be obtained by a County through GovOS.

The Remote Marriage Application is the sole marriage license product on the market that seamlessly integrates with CountyFusion. This distinctive integration ensures data integrity and reduces duplicate entry. GovOS is the only vendor that supports the integrated use of CountyFusion, Remote Marriage Application and the interface that communicates between the two proprietary products.
